Need write some command at node from ssh: # 3.1 Change directory to config: cd ~/mdbci/SOME_DIR # 3.2 Enter with ssh: vagrant ssh galera0 # 3.2 Write some command at "script.sh", for example, copy script from /mdbci/scripts/run_integration_tests.sh: nano script.sh #ctrl+v some text and ctrl+o to save, ctrl+x exit. # 3.3. For check, should be a created script.sh file: ls # Or open the created file: cat script.sh # 3.4 Exit from vagrant ssh exit # 4. Run created script (will see script at console and echo \$?=>0) ./mdbci ssh --command "cat script.sh" SOME_DIR/galera0 # 5. Run test (echo \$?=>0) pathToConfigToVBOXNode=SOME_DIR /galera0 rspec spec/unit/7109_ssh_spec.rb
Description https://github.com/OSLL/mdbci/blob/4a68ae9f1f9c8bf3f45cb622607e751a2466e1b8/core/session.rb#L193 Function: - should not contain code duplications - should work with arguments in transparently way (for exmaple - all args[i] should be replaced for human readable and understandable name) - exit code magic should be converted to raise - split for two functions: -- the first which returns its result as string in return -- the second just wraps first and print it to \$out.out - add integration test for the whole command "ssh"

```
./mdbci ssh --command ".install.shh" aws_suse_test/node0 --silent  
Connection to ec2-54-74-86-75.eu-west-1.compute.amazonaws.com closed.  
bash: ./install.shh: No such file or directory
```

Command on host returned non zero exit code, mdbci ended with exit code 1 but no exceptions thrown.
