Generate node at "/home/vagranttest /mdbci" (echo \$? => 0) ./mdbci --template confs/docker_lite.json generate SOME_DIR</p> <p># 2. Up nodes. ./mdbci up SOME_DIR</p> <p># 3. Create snapshot with job (path: SOME_DIR, result: success created snapshot) : http://maxscale-jenkins.mariadb.com:8090/view/All/job/create_snapshot/build?delay=0sec</p> <p># 4. Restore snapshot with job (path: SOME_DIR, result: success restore snapshot): http://maxscale-jenkins.mariadb.com:8090/view/All/job/restore_snapshot/build?delay=0sec</p> <p># Results: in console output cat command should search in absolute path and it must be created.</p>

Description

Comment says: "Relative path in ~/mdbci folder for RUNNING configuration. ", but in fact script using absolute path:

```
aws=`cat $environment_name/provider | grep -o aws | wc -l`
```

as result:

```
++ cat develop-jun14//provider
++ grep -o aws
++ wc -l
cat: develop-jun14//provider: No such file or directory
+ aws=0
```
